

BUILT FOR PAKISTAN · READY FOR THE WORLD

The farm knows more than the farmer is told.

An AI agriculture advisor that knows your farm, your crop, your weather, and your history — and tells you what to do and when, in your own language.

INTELLIGENCE

ACCESS

Agropioo · Soil & Signal

01

- THE PROBLEM

Decisions made by memory, when the stakes are life and livelihood.

Pakistan's 45 million farmers plan planting, irrigation, and harvest through tradition, memory, and guesswork — with almost no live data beneath them.

30–40%

of crops lost yearly to preventable disease, wasted water, and bad timing

< 5%

of farms reached by extension & advisory services

45M

farmers choosing high-stakes crops with no live data

- WHO IT AFFECTS

A disease spotted too late. A field watered before the rain. A crop sold at the wrong market.

For a smallholder family, each of these is not an inconvenience — it is a season's income riding on a guess.

The people with the least information have the most to lose. Agropioo is built for them, in their language, on the phone in their hand.

- THE SOLUTION

One platform that turns a farmer's daily crop questions into clear, timed answers.

ASK

AI Advisor routes each question to the right specialist

SEE

Photo disease detection and live market prices and farm weather

KNOW

Farm records, growth stages, and profit & loss for your own land

GROW

Crop recommendations and the schemes you qualify for

From first sign-up to confident daily decisions.

01 Sign up & choose

a language — Urdu, Punjabi, Pashto, Sindhi and more, with full right-to-left layout.

02 Map your farm

location, crop, and sowing date — the foundation all advice builds on.

03 Ask the advisor

anything about your crop; get answers grounded in your farm and live weather.

04 Act with confidence

Agropioo · Soil & Signal
diagnose a leaf, follow a weather advisory, and sell at the right price.

- WHAT'S BUILT

A working suite of seven tools on one dashboard.

AI Advisor

6 specialist agents, live farm data, streaming chat

Disease Detection

photo in, diagnosis + treatment advice out

Mandi Prices

live prices from 5 official sources + forecast

Farm Records

fields on a map, every activity logged

Weather Advisory

hyperlocal forecast turned into timed advice

Profit & Loss

budget, spend, ROI and break-even per crop

Crop Planner

Soil, season, and market demand scored to surface the crops most likely to pay this year.

Not a chatbot. A triage team of specialist agents.

A triage orchestrator understands your question and hands it to the right specialist — each with live tool access to your farm records, weather, market prices, and a curated knowledge base with vector search.

Streaming responses, conversation memory, persisted history — answers grounded in each farmer's own farm.

Crop advisor

field & crop science

Weather agent

live forecast + advice

Farm-data agent

your records & history

Prices agent

markets & projections

Schemes agent

subsidies you qualify for

Handoff

human escalation when needed

A photo of a leaf. A diagnosis and a treatment plan in seconds.

Capture a diseased leaf → the model classifies it across 38+ crop diseases → you get the disease, a confidence score, and clear next steps.

Then ask follow-up questions about it, and an AI turns the diagnosis into practical, local advice.

SCAN → DIAGNOSE → TREAT

- 1 Upload the affected leaf
- 2 Classified across 38+ diseases
- 3 Confidence score + diagnosis

Try it in the app

Real data under real decisions.

Prices you can sell to, weather you can plan around.

Mandi Prices

Live prices pulled from five official Pakistani sources — Punjab, Sindh, KPK, Balochistan and the national SPI — with a statistical forecast of where prices are heading and sell / hold signals.

Holt-Winters forecast · price alerts ·
admin ingest

Weather Advisory

Hyperlocal forecast woven with your crop and its growth stage to produce one clear advisory a day: when to irrigate, when to spray, what to protect against — before conditions turn against you.

OpenWeather · stage-aware rules ·
daily advisory

Advice is only as good as the farm it is grounded in.

Farm Records

Every field mapped on an interactive map, every activity logged as a record with its growth stage.

Profit & Loss

Budget a season, log expenses as they happen, and watch ROI and break-even move in real time.

Crop Planner

Soil, season, and market demand scored to surface the crops most likely to pay this year.

- THE TECHNOLOGY

Software-only, API-driven, built to run and to scale.

Next.js 16

full-stack, no separate backend

Neon Postgres

Lakebase database, migrations in-repo

@openai/agents

triaging multi-agent advisor

Hugging Face

plant-disease vision model

OpenWeather

hyperlocal forecast feeds

5 official APIs

live mandi price ingestion

pgvector

knowledge-base semantic search

Cloudinary

scan image storage

- **FEASIBILITY - WHAT WE'VE SHIPPED**

Fully working today.

SHIPPED & TESTED

- ✓ Full authentication — signup, OTP, login, reset (bcrypt · JWT)
- ✓ AI advisor with 6 agents + streaming + RAG knowledge base
- ✓ Disease detection — live vision model + treatment advice
- ✓ Mandi prices — live intake from 5 sources + forecast + alerts
- ✓ Weather advisory — hyperlocal forecast, stage-aware, daily
- ✓ Farms, records, profit & loss, crop planner — full CRUD
- ✓ 8 languages with right-to-left layout; 246 automated tests

NEXT

- ➔ Mobile end-to-end polish
- ➔ Full non-English coverage
- ➔ Broader scheme eligibility
- ➔ Scale price sources

- THE IMPACT

From memory to margin.

When a farmer knows before they act, the pattern of loss stops repeating.

20-40%

crops lost to preventable
causes today

30-40%

water wasted irrigating
before the rain

15-25%

more by selling at the right
market time

8

languages, one local
advisor

Built for Pakistan. Ready for the world.

An agriculture that respects tradition and scales with technology — advice in every farmer's own language, on the phone already in their hand.
